AI MONEY MENTOR

AI Financial Mentor

-Ritvik Katakam

Motivation

-> “To help users manage money better through intelligent financial insights.”

Introduction

- Managing personal finances is challenging due to lack of proper guidance and awareness
- Most individuals struggle with budgeting, saving, and investment planning
- Existing tools focus only on tracking, not intelligent decision-making
- There is a need for a system that provides personalized financial insights
- **AI Money Mentor** is developed to address this gap using AI-driven recommendations
- It integrates budgeting, goal planning, investment advice, and financial analysis in one platform

Problem Statement

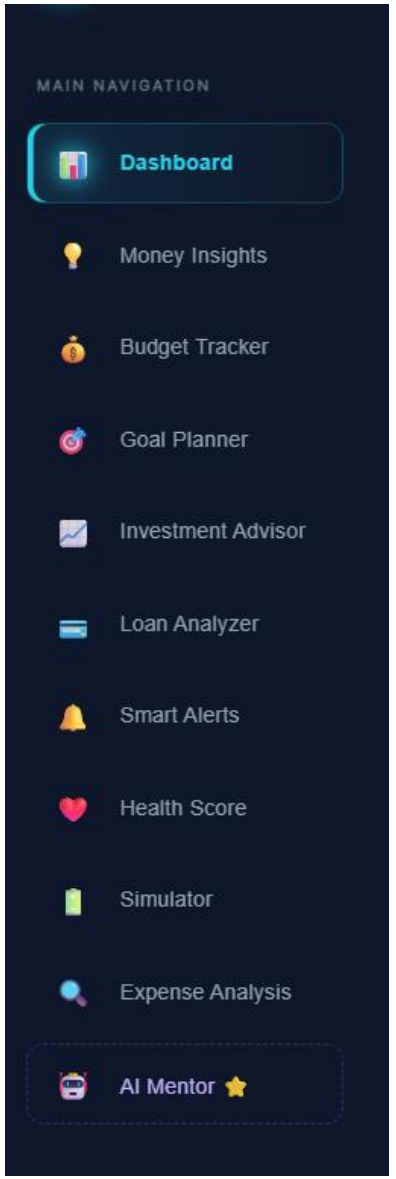
-> Most individuals lack proper financial planning and access to affordable advisory services. This project addresses the gap by building an AI-powered system that provides personalized financial insights, planning, and decision support.

Methodology

- The AI Money Mentor works by taking user inputs such as income, expenses, and savings. It processes this data to calculate important values like savings percentage and spending. The system uses simple rule-based logic to analyze the user’s financial condition. Different modules like Budget Tracker, Goal Planner, Investment Advisor, and Loan Analyzer help in analyzing specific areas. The AI Mentor provides suggestions based on user queries, and the final results are shown through dashboards and alerts for better understanding

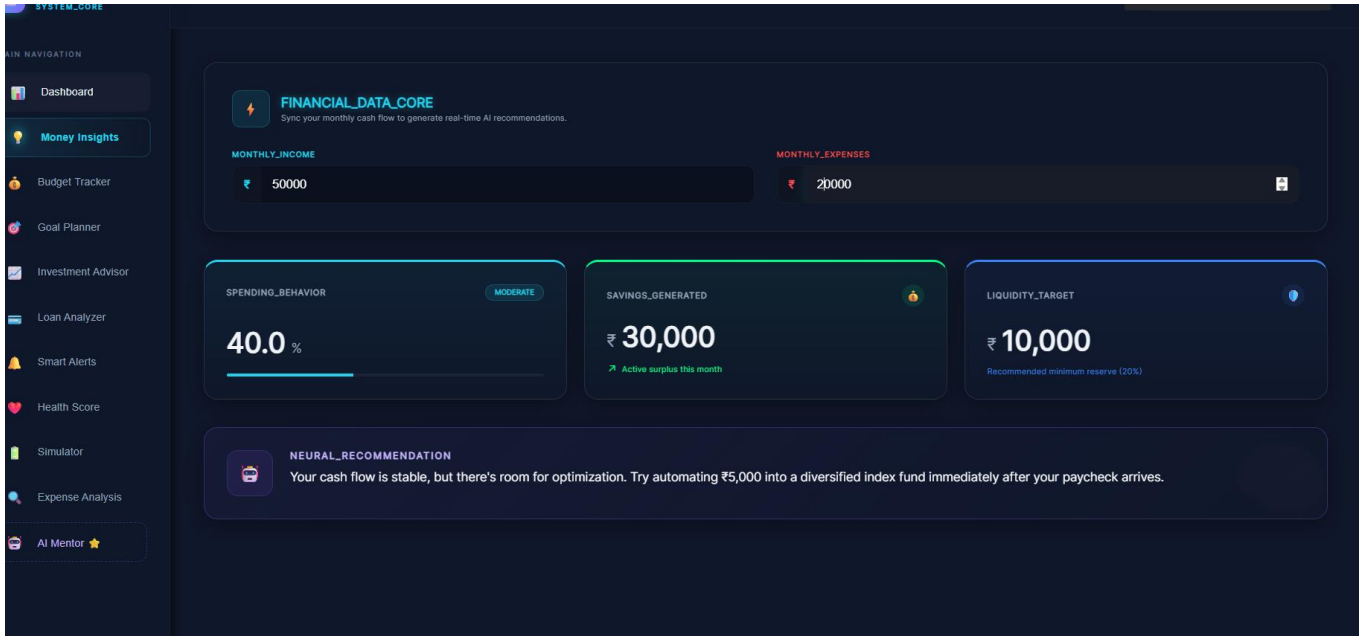
Outcomes

- This interface displays the main menu of the system, helping users easily access different features like budgeting, goals, and investment. It improves usability by providing clear and organized navigation

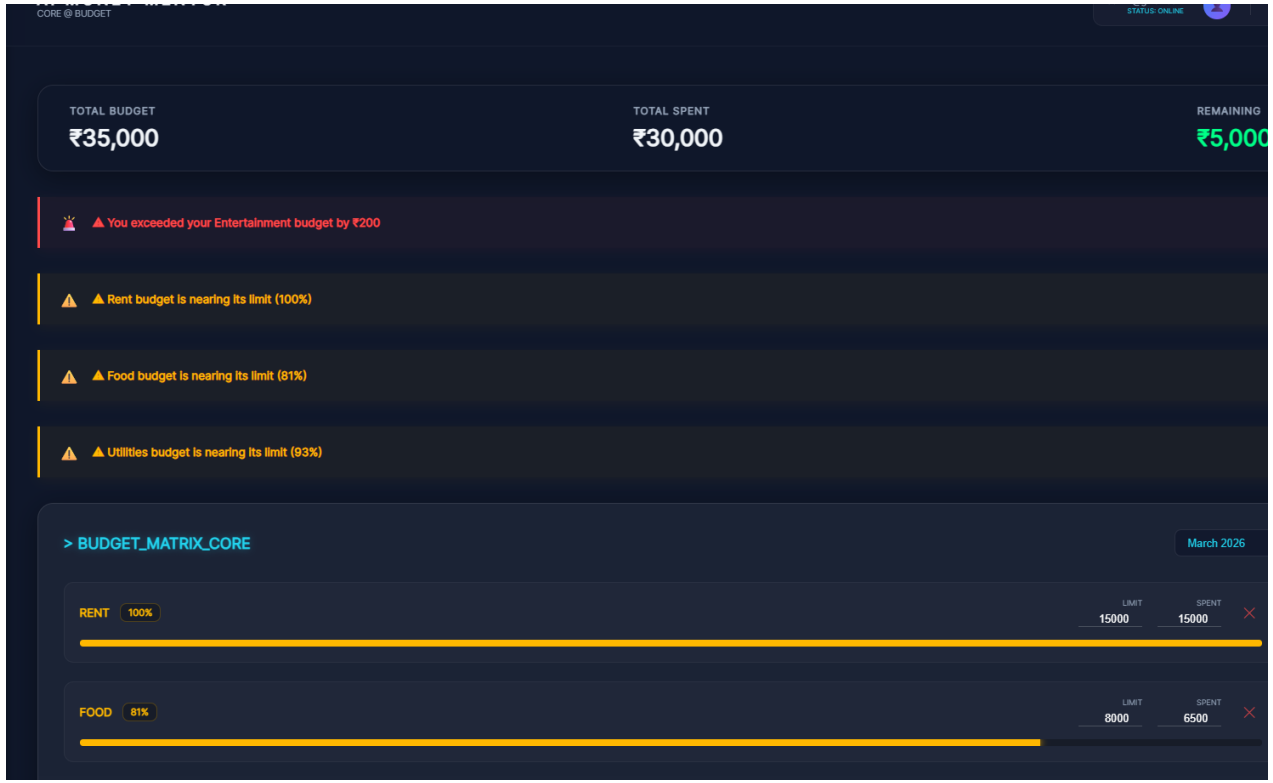


1. Money Insights

- Provides an overview of income, expenses, and savings.
- Helps users understand their financial health and spending behavior.



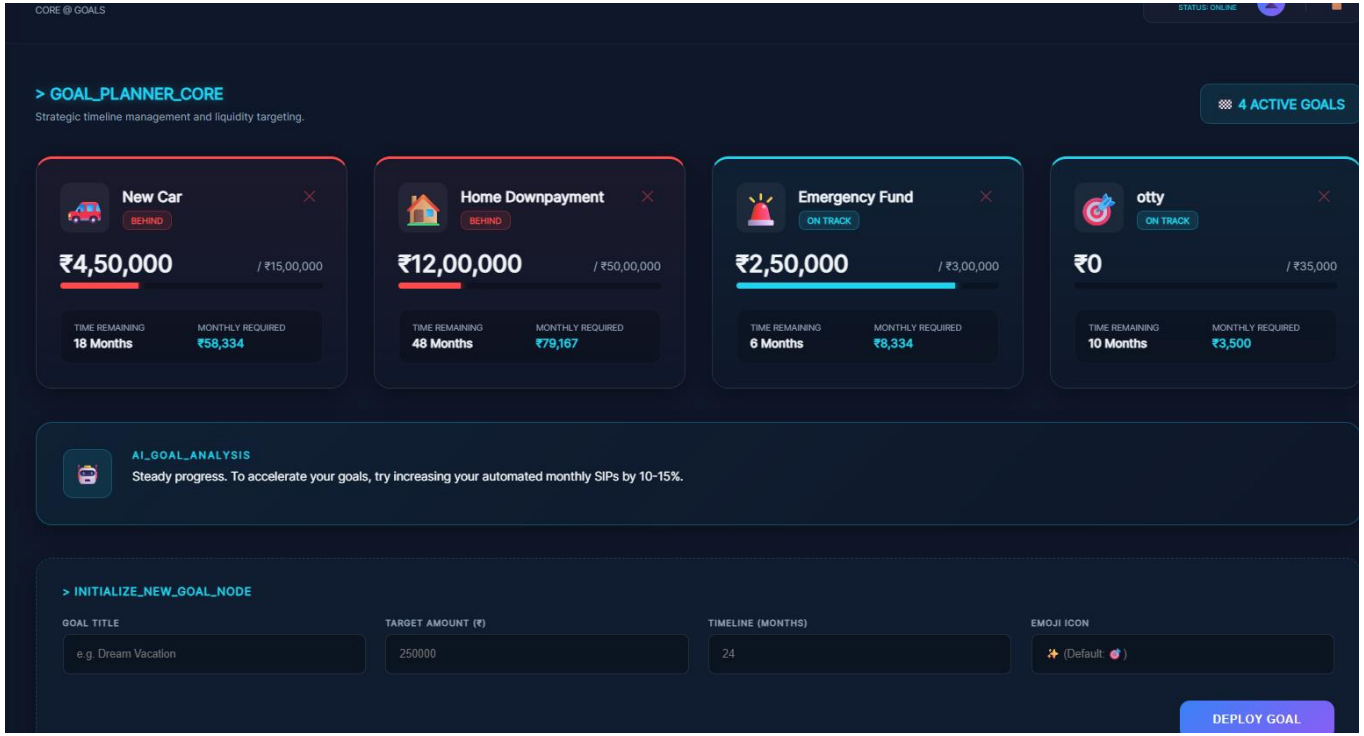
2. Budget tracker



- Tracks category-wise spending and compares it with allocated budgets.
- Identifies overspending and helps maintain financial discipline.

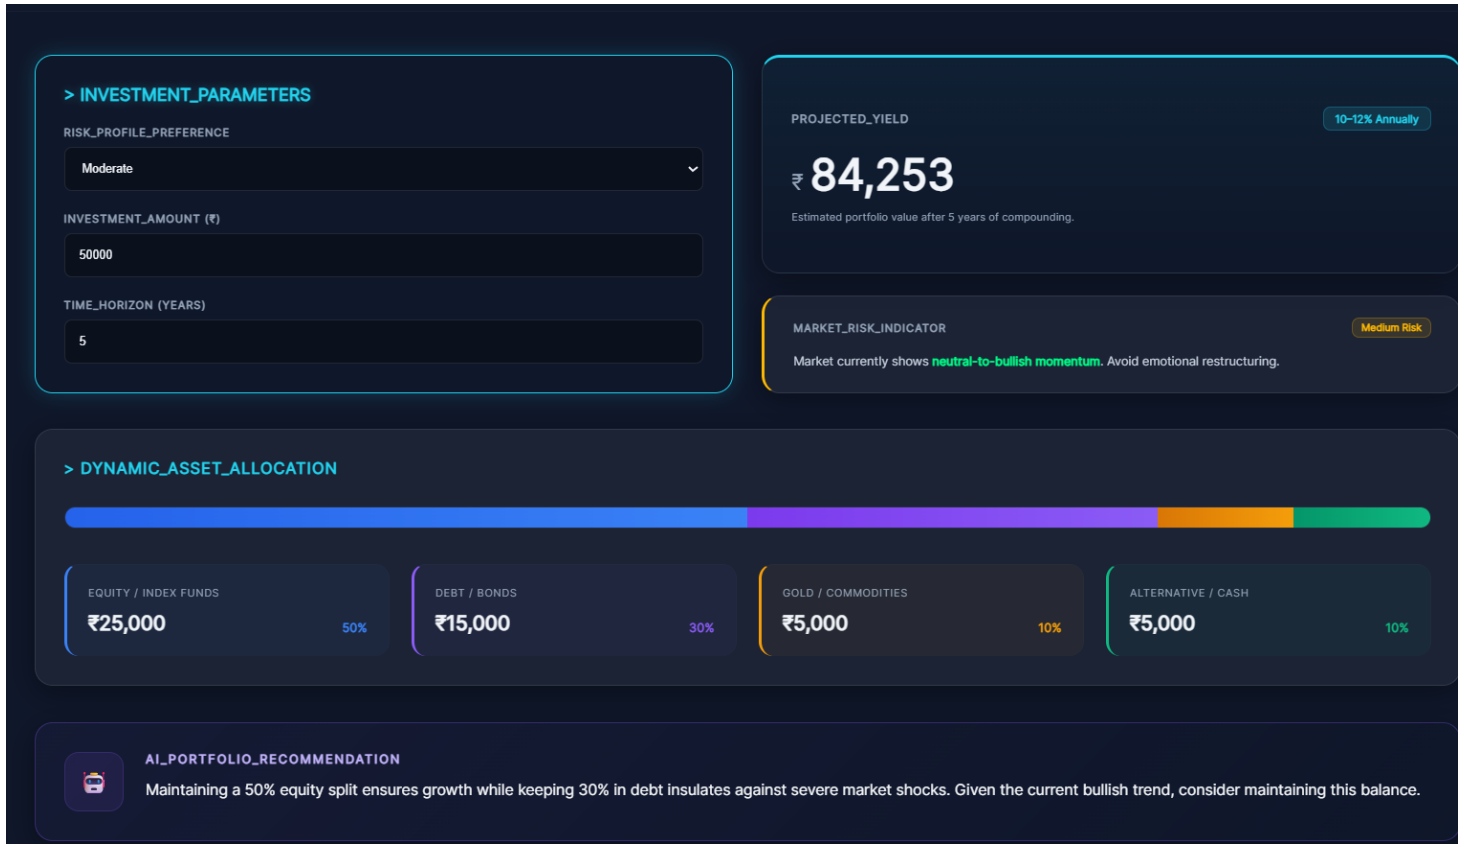
3. Goal Planner

- Allows users to set and monitor financial goals like savings or purchases.
- Tracks progress and suggests improvements to achieve targets faster.



4. Investment Advisor

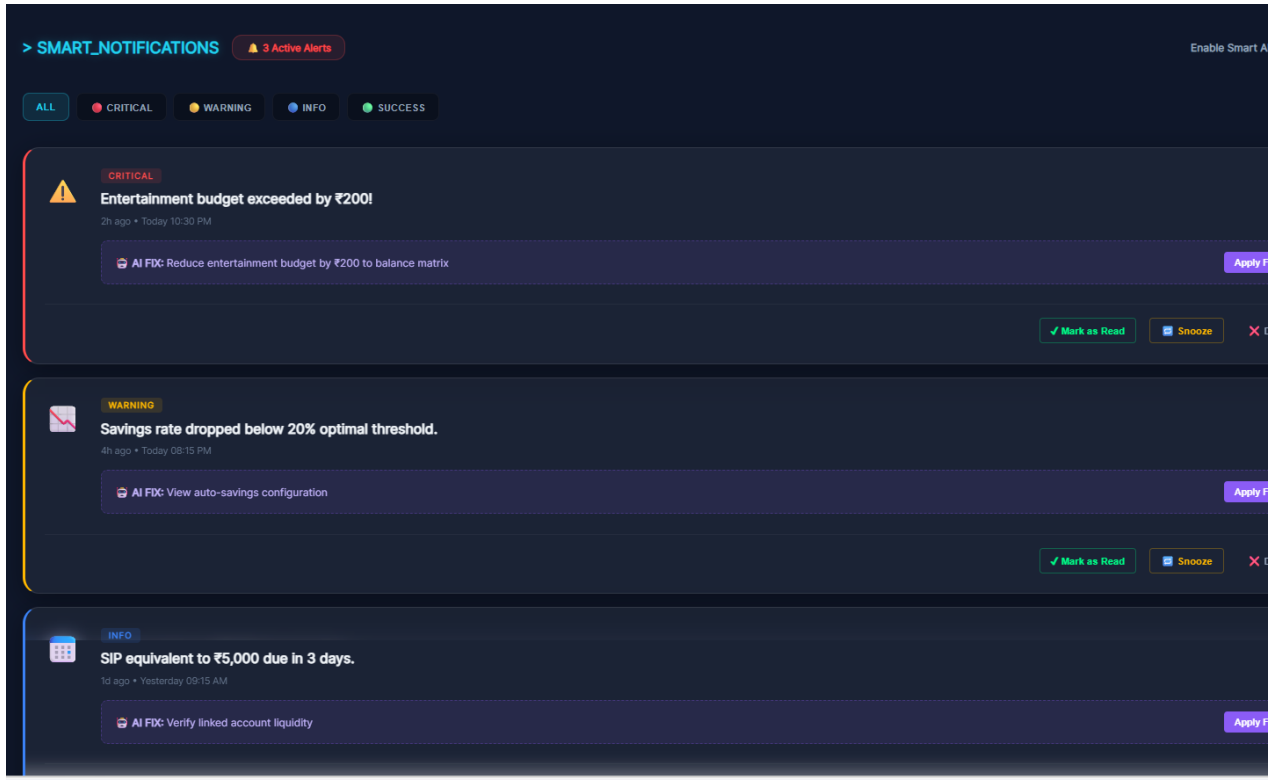
- Recommends a balanced investment portfolio based on user profile.
- `Helps in making informed investment decisions with risk management.



5. Loan Analyzer

- Calculates EMI, interest, and total payable amount for loans.
- Helps users understand loan impact and plan repayments efficiently.

6. Smart Alerts



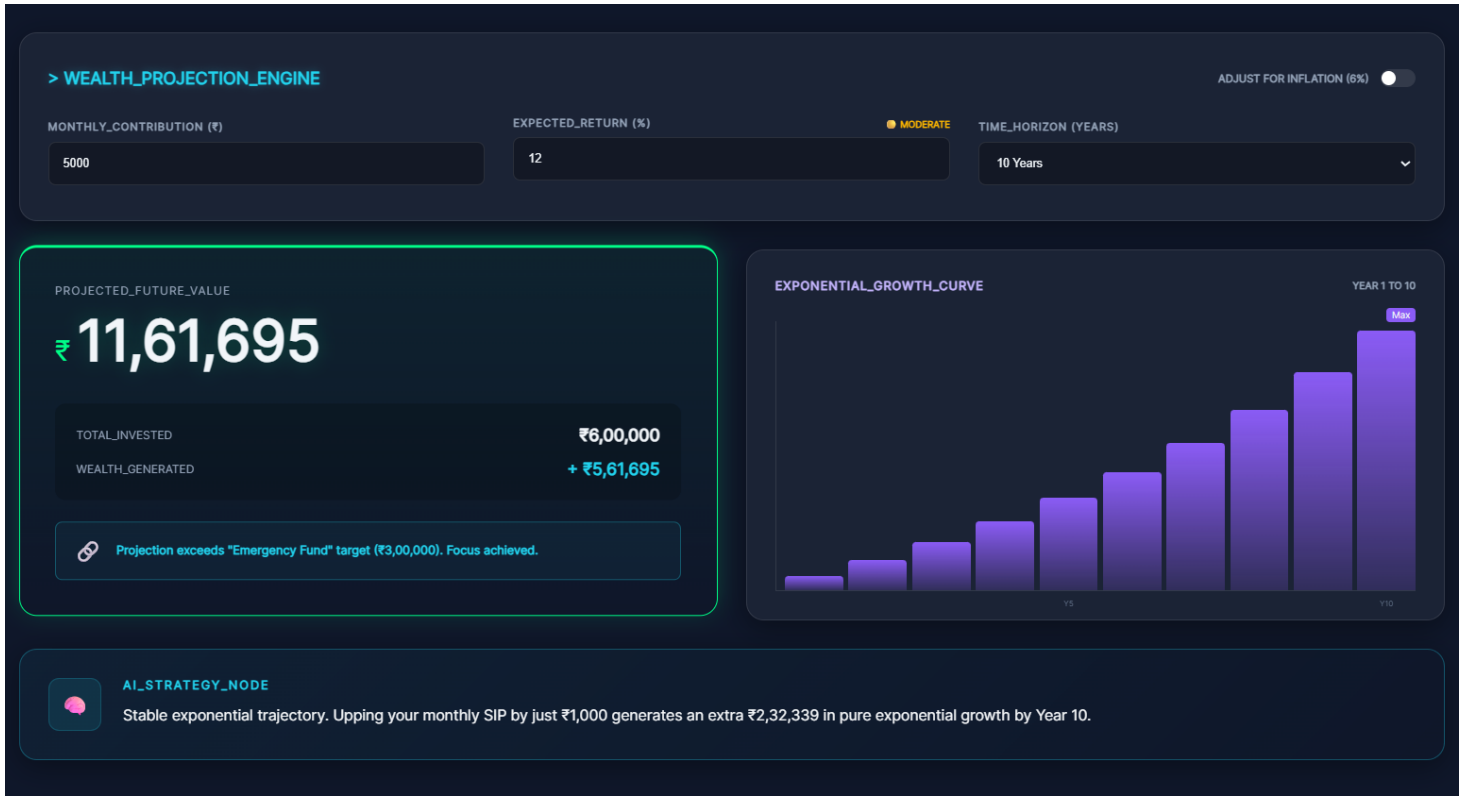
- Generates real-time alerts for overspending and important events.
- Provides quick actions to correct financial issues.

7. Health Score

- Evaluates overall financial stability using key parameters.
- Gives a score and suggestions to improve financial condition.

8. Simulator

- Projects future wealth based on monthly investments and returns
- Helps users plan long-term financial growth effectively.

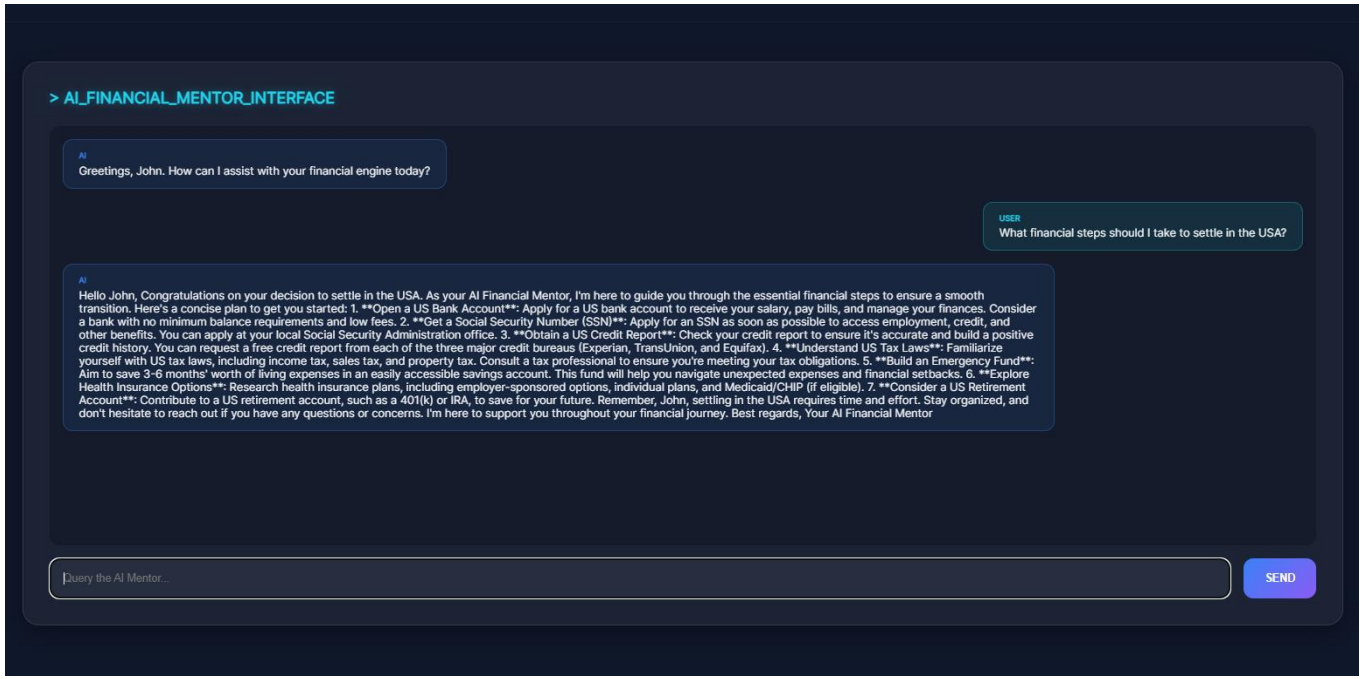


9. Expense Analysis

- Breaks down expenses across categories with detailed insights.
- Helps identify areas where spending can be reduced.

10. AI Mentor

- Acts as an intelligent assistant for financial guidance.
- Provides personalized suggestions based on user inputs.



Important Note

- The entire process of AI Money Mentor is personalized and varies from person to person.
- All insights, recommendations, and outcomes are dynamically generated based on individual financial inputs such as income, expenses, goals, and risk preferences.

Countries Used in the Project

- IN India – INR
- US USA – USD
- GB United Kingdom – GBP
- DE Germany – EUR
- FR France – EUR
- JP Japan – JPY
- CN China – CNY
- CA Canada – CAD
- AU Australia – AUD
- SG Singapore – SGD
- AE UAE – AED
- SA Saudi Arabia – SAR
- ZA South Africa – ZAR
- RU Russia – RUB
- BR Brazil – BRL
- MX Mexico – MXN
- KR South Korea – KRW

Thanking You :)
